

Electronics Pre Course Material - 2020

Task 1

If you have not studied Electronics for GCSE it would be beneficial for you to look through as many of the chapters of the textbook as you can. Although it is not a requirement to have studied it at this GCSE, many of your future classmates will have studied this course so it will provide you with a good foundation before you start. The following link will take you to the chapters and there are exercises throughout to complete.

<https://resources.edugas.co.uk/Pages/ResourceSingle.aspx?rId=938>

If you manage to complete any of these exercises and would like to check your answers, please send me an email on claire.mottram@calday.co.uk and I will be able to give you access to these.

If you have studied Electronics for GCSE, firstly, it wouldn't hurt many of you to have a look through the chapters of the textbook, especially those that you were less confident with at GCSE. If you have done these it would be beneficial to complete some past paper questions shortly before starting the course to remind yourself of some of the content that you may have forgotten.

Task 2

The second task I would like you to complete is to read the core concepts chapter for your A-level and complete the exercise at the end of this chapter (the link is provided below). Please bring your answers to your first lesson in September, please don't worry if you are struggling to complete any of these, just do your best with it and any questions please feel free to contact me.
